

Beauty is a manifestation of health; bad teeth spoil both. To keep the teeth in constant beauty and the mouth in perfect health there is nothing equal to Odol, the famous liquid antiseptic dentifrice. Being a liquid it enters all holes, cracks, and interstices in and between the teeth, and being antiseptic it destroys and expels all injurious bacterial organisms lurking there. Odol leaves wherever it touches a microscopically thin but thoroughly effective antiseptic coating, which maintains its protective influence *for hours after* the mouth has been rinsed with it. By the use night and morning of a few drops of Odol in a tumbler of lukewarm water the health of the mouth and the beauty of the teeth are assured.
